

ALEKSANDR DOLINSKY

ABOUT ME

I am actively seeking new professional opportunities as a **Front-End Developer**, aiming to join a forward-thinking team where I can apply modern development practices, contribute to building exceptional user experiences, and continue growing both technically and creatively as a specialist.

PERSONAL WEBSITE

In this section, you'll find websites, brand identity projects, and other examples that reflect my style, level of execution, and attention to detail.

PROFESSIONAL EXPERIENCE

With a deep appreciation for semantic HTML, modern CSS, and Sass, I craft responsive, accessible layouts that look impeccable on any device. My fluency in JavaScript (ES5/ES6) and TypeScript allows me to write code that is not only robust and maintainable but also elegantly structured.

In the world of **React**, I seamlessly work with both class-based and functional components — leveraging state management, conditional rendering, and higher-order components to build scalable, reusable interfaces. Using **React Hooks**, I confidently implement both client-side rendering (CSR) and server-side rendering (SSR) strategies to optimize performance and user experience.

On the data layer, I integrate efficiently with **GraphQL API** via Apollo Client and Relay, and with **RESTful services** using Fetch, Axios, SWR, and React Query, ensuring real-time synchronization and optimized data flow. I build complex, user-friendly form experiences with **React Hook Form** and **Formik**, including validation, error handling, and dynamic form logic.

Beyond React development, I have strong experience with **Next.js**, utilizing its **SSR/SSG** capabilities, dynamic routing, and API routes to build high-performance, SEO-friendly Web-applications. I'm also proficient in **Vue.js**, applying its reactive system, component architecture, and Vue Router/Vuex to build modern, maintainable SPA with a smooth development.

Styling is second nature to me—whether using the utility-first approach of **Tailwind CSS**, or crafting sleek UIs with **Material-UI**, **PrimeReact**, **Mantine**, or **Chakra UI**. For custom solutions, I rely on **Emotion**, **Styled Components**, and **CSS Modules** to build themeable, maintainable styles.

ADMSS LTD (10.2022 - 05.2025)

I was part of a cross-functional team that included a backend developer, a designer, and a QA specialist. I completed numerous cases (individual tasks) covering the full development cycle — from programming to testing. I worked on building two CRM systems based on React for a car dealership: a CRM for automating service processes — a solution that optimizes customer interactions, as well as internal business processes.

Matrix Agency LLC (05.2019 - 10.2022)

I participated in the development of scalable web applications as part of a large team, using modern JavaScript frameworks such as React, Vue, and Next. I closely collaborated with UX/UI designers to transform concepts and prototypes into intuitive, user-friendly, and visually appealing interfaces. I ensured consistency and adherence to brand style across platforms and devices by implementing design systems and components in line with company guidelines. I utilized frontend tools (Webpack, Babel, ESLint, Prettier) and build processes to optimize performance. I tested interfaces across major browsers. I also took part in code reviews, implemented best practices, and automated CI/CD processes to enable continuous integration and delivery of new features.

EDUCATION

Open International University of Human Development "Ukraine"

(<https://uu.edu.ua/>) — software engineering

Interregional Higher Vocational School of Communications

(<https://pkvfp.kiev.ua/>) — radio mechanic
