

ALEKSANDR DOLINSKY

ABOUT ME

I am actively seeking new professional opportunities as a Front-End Developer, aiming to join a forward-thinking team where I can apply modern development practices, contribute to building exceptional user experiences, and continue growing both technically and creatively as a specialist.

PERSONAL WEBSITE

In this section, you'll find projects that reflect my style.

PROFESSIONAL EXPERIENCE

I build user interfaces with a strong focus on structure and user experience. I am fluent in JavaScript (ES5/ES6) and TypeScript, enabling me to write code that is both user-friendly and well-organized.

In the React ecosystem, I work confidently with both class-based and functional components. I leverage state management, conditional rendering, and higher-order components to build scalable and reusable interfaces. Using React Hooks, I'm comfortable implementing both client-side (CSR) and server-side (SSR) rendering strategies to optimize performance.

On the data layer, I integrate GraphQL API via Apollo Client and Relay, and work with REST services using Fetch, Axios, SWR, and React Query.

Beyond React, I have experience with Next, leveraging its features for dynamic routing and API routes. I also have hands-on experience with Vue, taking advantage of its reactive framework, component-based architecture, Vue Router, and Vuex to create modern, maintainable SPA.

Styling comes naturally to me-whether I'm using Bootstrap, Tailwind CSS, or building custom interfaces with Material-UI, PrimeReact, Mantine, or Chakra UI.

ADMSS LTD

I was part of a cross-functional team that included a backend developer, a designer, and a QA specialist. I completed numerous cases (individual tasks) covering the full development cycle — from programming to testing. I worked on building two CRM systems based on React for a car dealership: a CRM for automating service processes — a solution that optimizes customer interactions, as well as internal business processes.

Matrix Agency LLC

I participated in the development of scalable web applications as part of a large team, using modern JavaScript frameworks such as React, Vue, and Next. I closely collaborated with UX/UI designers to transform concepts and prototypes into intuitive, user-friendly, and visually appealing interfaces. I ensured consistency and adherence to brand style across platforms and devices by implementing design systems and components in line with company guidelines. I utilized frontend tools (Webpack, Babel, ESLint, Prettier) and build processes to optimize performance. I tested interfaces across major browsers. I also took part in code reviews, implemented best practices, and automated CI/CD processes to enable continuous integration and delivery of new features.

EDUCATION

Open International University of Human Development "Ukraine"

(<https://uu.edu.ua/>)

A software specialist developed and maintained software applications or systems..

Interregional Higher Vocational School of Communications

(<https://pkvfp.kiev.ua/>)

A radio technician in the Armed Forces of Ukraine is responsible for installing, maintaining, repairing, and troubleshooting military radio communication equipment to ensure reliable and secure communications during operations.
