ALEKSANDR DOLINSKY

ABOUT ME

I am actively seeking new professional opportunities as a Front-End Developer, aiming to join a forward-thinking team where I can apply modern development practices, contribute to building exceptional user experiences, and continue growing both technically and creatively as a specialist.

PERSONAL WEBSITE

In this section, you'll find projects that reflect my style.

PROFESSIONAL EXPERIENCE

I build interfaces. I am fluent in JavaScript (ES5/ES6) and TypeScript, which allows me to write code that is not only user-friendly but also structured.

In the React world, I work with both class and functional components, using state management, conditional rendering, and higher-order components to build scalable and reusable interfaces. Using React Hooks, I am confident in implementing client-side (CSR) and server-side rendering (SSR) strategies.

On the data layer, I integrate with GraphQL API via Apollo Client and Relay, as well as REST services using Fetch, Axios, SWR, and React Query. I build complex, user-friendly interfaces using React Hook.

In addition to developing in React, I have experience working with Next, using its dynamic routing capabilities and API routes. I also have experience with Vue, using its reactive framework, component architecture, Vue Router, and Vuex to build modern, maintainable SPAs with an efficient development process.

Styling is second nature to me, whether I'm using Bootstrap, Tailwind, or creating custom styles.

ADMSS LTD

I was part of a cross-functional team that included a backend developer, a designer, and a QA specialist. I completed numerous cases (individual tasks) covering the full development cycle — from programming to testing. I worked on building two CRM systems based on React for a car dealership: a CRM for automating service processes — a solution that optimizes customer interactions, as well as internal business processes.

Matrix Agency LLC

I participated in the development of scalable web applications as part of a large team, using modern JavaScript frameworks such as React, Vue, and Next. I closely collaborated with UX/UI designers to transform concepts and prototypes into intuitive, user-friendly, and visually appealing interfaces. I ensured consistency and adherence to brand style across platforms and devices by implementing design systems and components in line with company guidelines. I utilized frontend tools (Webpack, Babel, ESLint, Prettier) and build processes to optimize performance. I tested interfaces across major browsers. I also took part in code reviews, implemented best practices, and automated CI/CD processes to enable continuous integration and delivery of new features.

EDUCATION

Open International University of Human Development "Ukraine"
(https://uu.edu.ua/)

A software specialist developed and maintained software applications or systems..

Interregional Higher Vocational School of Communications
(https://pkvfp.kiev.ua/)

A radio technician in the Armed Forces of Ukraine is responsible for installing, maintaining, repairing, and troubleshooting military radio communication equipment to ensure reliable and secure communications during operations.
