ALEKSANDR DOLINSKY

ABOUT ME

I am actively seeking new professional opportunities as a Front-End Developer, aiming to join a forward-thinking team where I can apply modern development practices, contribute to building exceptional user experiences, and continue growing both technically and creatively as a specialist.

PERSONAL WEBSITE

In this section, you'll find projects that reflect my style.

PROFESSIONAL EXPERIENCE

With a deep appreciation for semantic HTML, CSS, and SASS, I create responsive and accessible layouts that look flawless on any device. My fluency in JavaScript (ES5/ES6) and TypeScript allows me to write code that is not only robust and user-friendly, but also elegantly structured. In the world of React, I work seamlessly with both class and functional components, using state management, conditional rendering, and higher-order components to create scalable and reusable interfaces. Using React Hooks, I confidently implement client-side rendering (CSR) and server-side rendering (SSR) strategies to optimize performance and user experience. At the data level, I effectively integrate with GraphQL API via Apollo Client and Relay, as well as REST services using Fetch, Axios, SWR, and React Query, ensuring real-time synchronization and optimized data flow. I build complex, user-friendly forms using React Hook Form and Formik, including validation, error handling, and dynamic form logic. In addition to developing in React, I have extensive experience with Next.js, leveraging its capabilities, dynamic routing, and API routes to create high-performance forms. I also have experience with Vue.js, leveraging its reactive framework, component architecture, and Vue Router/Vuex to create modern, maintainable SPAs with a smooth development process. Styling is second nature to me, whether I'm using the usability-oriented Bootstrap, Tailwind CSS approach, or creating elegant UIs with Material-UI, PrimeReact, Mantine, or Chakra UI. For custom solutions, I rely on Emotion, Styled Components, and CSS Modules to create styles.

ADMSS LTD

I was part of a cross-functional team that included a backend developer, a designer, and a QA specialist. I completed numerous cases (individual tasks) covering the full development cycle — from programming to testing. I worked on building two CRM systems based on React for a car dealership: a CRM for automating service processes — a solution that optimizes customer interactions, as well as internal business processes.

Matrix Agency LLC

I participated in the development of scalable web applications as part of a large team, using modern JavaScript frameworks such as React, Vue, and Next. I closely collaborated with UX/UI designers to transform concepts and prototypes into intuitive, user-friendly, and visually appealing interfaces. I ensured consistency and adherence to brand style across platforms and devices by implementing design systems and components in line with company guidelines. I utilized frontend tools (Webpack, Babel, ESLint, Prettier) and build processes to optimize performance. I tested interfaces across major browsers. I also took part in code reviews, implemented best practices, and automated CI/CD processes to enable continuous integration and delivery of new features.

EDUCATION

Open International University of Human Development "Ukraine"
(https://uu.edu.ua/)

A software specialist developed and supported software applications or systems, ensuring they met user needs and technical requirements.

Interregional Higher Vocational School of Communications
(https://pkvfp.kiev.ua/)

A radio technician in the Armed Forces of Ukraine is responsible for installing, maintaining, repairing, and troubleshooting military radio communication equipment to ensure reliable and secure communications during operations.
